Important Health Warning: Photosensitive Seizures

A very small percentage of people may experience a seizure when exposed to certain visual images, including flashing lights or patterns that may appear in video games. Even people with no history of seizures or epilepsy may have an undiagnosed condition that can cause "photosensitive epileptic seizures" while watching video games. Symptoms can include light-headedness, altered vision, eye or face twitching, jerking or shaking of arms or legs, disorientation, confusion, momentary loss of awareness, and loss of consciousness or convulsions that can lead to injury from falling down or striking nearby objects. **Immediately stop playing and consult a doctor if you experience any of these symptoms.** Parents, watch for or ask children about these symptoms—children and teenagers are more likely to experience these seizures. The risk may be reduced by being farther from the screen; using a smaller screen; playing in a well-lit room, and not playing when drowsy or fatigued. If you or any relatives have a history of seizures or epilepsy, consult a doctor before playing.

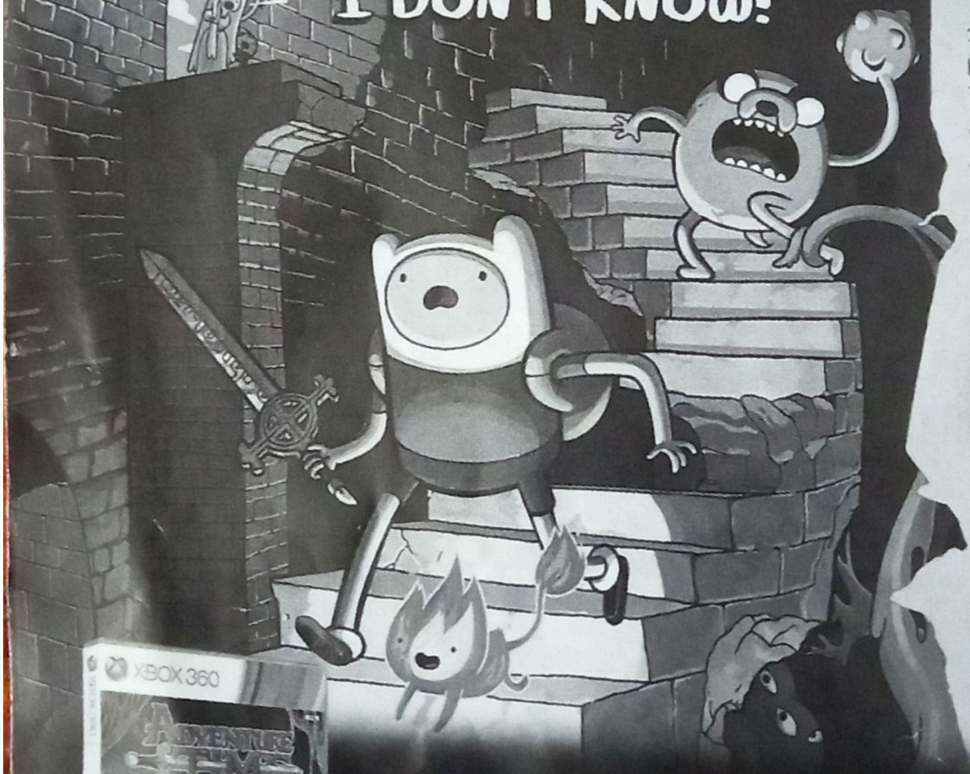
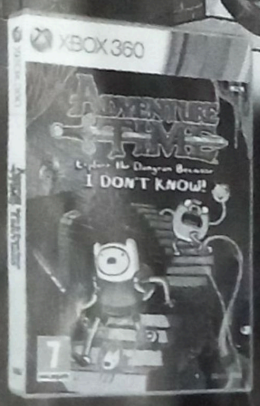
FUN AND ADVENTURE AWAIT UNDERGROUND!

ADVENTURE TIME

Explore the Dungeon Because I DON'T KNOW!

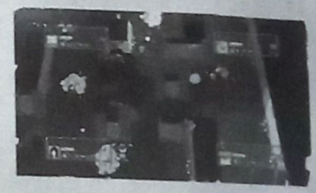




For those who (still) don't know:

1/ You can grab 3 friends (or give them a gamepad, that works fine as well) and explore the FUN-GEON together

2/ By FUN-GEON, if you really wanna know, I mean a 100 floor Adventure Time-like dungeon designed by the series creator and filled with tons of stuff other people really don't want to know about



3/ If you really want to know who the 8 playable characters are, their names are hidden in the ad. At least you know why you are exploring it. But seriously, if you are still reading at this point, well, maybe you should consider trying the game? Just saying...
